

MIDCOAT CLEAR

Flake & Pearl Carrier

VOC 2.6

MIX 3:1

- FAST DRYING, LOW-BUILD FORMULA
- HOLDS EVEN THE HEAVIEST FLAKES IN SUSPENSION
- LOCKS EFFECT PARTICLES IN PLACE FOR EVEN DISTRIBUTION
- PROVIDES MAXIMUM CONTROL OVER FLAKES AND PEARLS
- SHORT-FILLED CANS FOR EASY BLENDING AT HIGH SPEED

Kirker's EC310 Midcoat Clear is a low-build intercoat effect carrier designed specifically to hold flake and pearl additives in suspension, providing maximum control for custom color and effect applications. Whether laying down a set of racing stripes in high-sparkle holographic flake, or painting a soft shimmering pearl effect on an overall job, the use of EC310 Midcoat Clear will help provide consistent, repeatable results.

Made with the same high-performance polyol found in Kirker's urethane topcoat clears, this is an activated system, so there's never any need for concern over weak-link intercoat failures like with competitive single-component midcoat clears.

Packaged in round cans, short-filled to 3/4 to allow space for blending in effect additives at high speed.
